

Learning Target 2.4

Unit to quest (long quiz/short test) is Thursday
on LT 2.0, 2.2, 2.3 and 2.4

Get out your notebook answer the following

$$37 \text{ Rb: } p = 37$$

$$n = 85 - 37 - 48$$

$$e = 37$$

$$26 \text{ Fe}^{2+}: p = 26$$

$$n = 56 - 26 = 30$$

$$e = 26 - 2 = 24$$

Write the electron configurations for the following

$$16 \text{ S}^{-2}$$

$$29 \text{ Cu}^{+1}$$

* the type of atom (Element) is based
on number of protons **NOT**
number of electrons

Oct 7-7:59 AM

Learning Target 2.4

I can determine the number of **valence electrons** an atom has based
on electron configuration.

Write the electron configurations of elements 3-10.

Li:

Be:

B:

C:

N:

O:

F:

Ne:

Oct 7-8:08 AM

B 2.0

~~$p^+ = 5$~~

~~$s^+ = 6$~~

$e^- = 5$

Electron config.
B

2.3 $\rightarrow e^- = 5$
 $1s^2 2s^2 2p^1$

2.4

\rightarrow only few 8
 e^- matter

Oct 8-11:01 AM

Learning Target 2.4

I can determine the number of valence electrons an atom has based on electron configuration.

Write the electron configurations of elements 3-10.

- 1 Li: $1s^2 2s^1$
- 2 Be: $[He] 2s^2$
- 3 B: $[He] 2s^2 2p^1$
- 4 C: $[He] 2s^2 2p^2$
- 5 N: $[He] 2s^2 2p^3$
- 6 O: $[He] 2s^2 2p^4$
- 7 F: $[He] 2s^2 2p^5$
- 8 Ne: $[He] 2s^2 2p^6$
- 9 Ca: $[Ar] 4s^2$
- 10 Cl: $[Ne] 3s^2 3p^5$

Q: Are all the electrons in an atom important to "do" chemistry?

A: No, only the electrons in the out s and p sublevel. (Valence Electron)
max: 8

Oct 7-8:08 AM

How is possible for different number of total electrons but have same number of valence electrons?

2 val. e^-

s^1	s^2	
Be 4	Beryllium	
Mg 12	Magnesium	
Ca 20	Calcium	
Sr 38	Strontium	
Ba 56	Barium	
Ra 88	Radium	

$[He]2s^2$

$[Rn]7s^2$

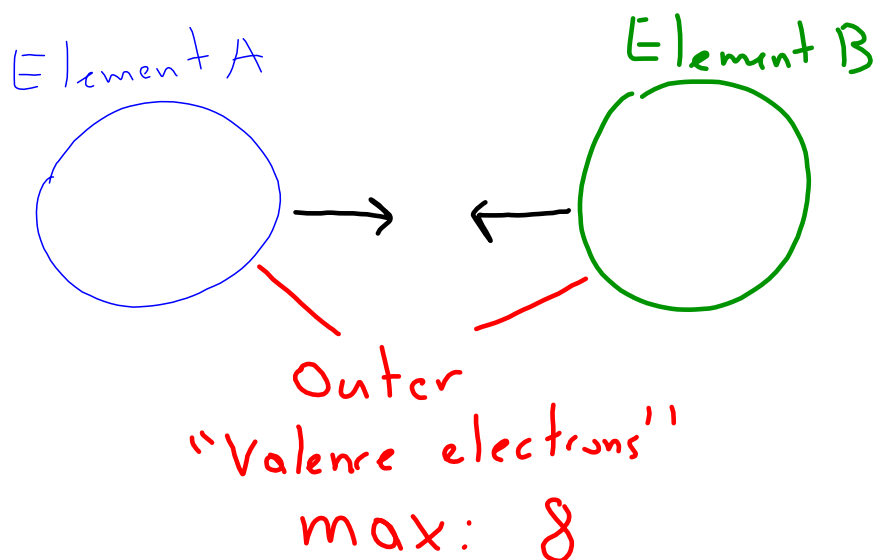

End in s^2
but different energy levels

Oct 8-8:55 AM

You will be spending the rest of the year studying max of $8e^-$.

Oct 8-9:30 AM

The only electrons involved in "doing" chemistry are the 8 valence electrons.

Oct 8-8:36 AM

Oct 7-8:49 AM
